

Profiles

In Order Tool, users may be granted one or more **Profiles**. Profiles are roles that enable different ordering permissions and workflows.

The Unizin Order Tool supports two Profiles: **Instructor** and **Coordinator**. Both user Profiles may order digital content for course sections. The difference lies in the set of courses for which they can place orders:

- **Instructors** may place orders for the courses they're assigned to teach.
- **Coordinators** may place orders on behalf of Instructors, based on permissions granted to them by their institution.

These two Profiles enable Institutions to use the Order Tool in support of a range of content ordering practices.

Why are profiles useful?

Profiles enable different ordering processes within an institution.

The **Instructor** profile enables Institutions to support a conventional method of content ordering. Faculty and Instructors place orders during a Term's ordering period for their own courses.

A **Coordinator** profile enables Institutions to support content ordering practices where content selection is a matter of departmental, curricular, or program policy. Alternatively, **Coordinators** may also play the role of department staff who submit content orders in place of Faculty.

Coordinators are granted access to order content [based on permissions](#) determined by their institution.

During the Unizin Order Tool's implementation, Unizin will work with your institution to identify Coordinators and properly grant them permissions to order content. Institutions may also submit a Services ticket to add, remove, or change **Coordinator** permissions.

Does the interface differ by profile?

Yes.

The interfaces differ to support the different, unique workflows of each user. Users with multiple Profiles may switch between them using the [User menu](#).
